Workshop abstract

Today, when psychology it is in a high demand not only as science, but also as practice, the requirements for the professional training of a psychologist are continuously increasing. From the psychologist – practical activity requires professionalism in understanding and helping the client. In psychology, where each task is unique, the solution involves the synthesis of science and practice. To implement it, you need a talent that is polished in the process of formation and education of the psychologist as a person who is thinking creatively. There are special requirements for the personality of the psychologist, as well. A psychologist, along with mastering professional knowledge, scientific and theoretical training, possession of professional practical skills of working with people, should be well aware of and understand themselves, their personal characteristics, have skills of self-development and self-improvement.

Within this workshop, the main components of the psychologist's professional thinking will be revealed: Personal, intellectual and operational components. Besides this, it will be shown in what ways it is possible to develop professional psychological thinking through lectures and seminars. There will be also demonstrated how the ideas of Gestalt therapy and Psychodrama therapy can work in working with students directly on couples.

Workshop:
